

A modern, multi-level interior space featuring a large lounge area with a light-colored sofa, armchairs, and a marble coffee table. The ceiling is high with exposed wooden beams and a balcony with a glass railing. Several Genlyte lighting fixtures are visible, including large spherical pendants and smaller track head lights. The overall aesthetic is clean and contemporary.

Forging the cutting edge

Genlyte is transforming the lighting industry with myCreation, an advanced additive manufacturing technology that enables rapid production of high-quality, customizable luminaires for select Lightolier and Day-Brite/CFI portfolios.

myCreation technology streamlines design-to-delivery with on-demand colors, textures, and configurations—while reducing components and using 3D-printed parts made from at least 75% recycled or mass-balanced, bio-circular materials.

When you see the myCreation logo, you'll know that product is powered by myCreation technology, making it customizable for indoor applications in hospitality, retail and offices, while also contributing to a more sustainable future.

Powered by **myCreation**

Create or co-create beautiful lighting with an intuitive online configurator that allows step-by-step customization.

Use of recycled polycarbonate materials and on-demand local production reduces waste and carbon emissions.

Our method of printing luminaires in the U.S. shortens the tailored manufacturing process from months to weeks.

Quality material with a high impact rating allows for durable, high-performance energy-efficient lighting solutions.

Sustainability at the core

Our myCreation additive manufacturing process minimizes waste. Designed for the circular economy, these luminaires can help reduce your carbon footprint, using printed parts with at least 75% recycled and bio-circular materials, and reducing energy use in production. These luminaires are DLC Premium listed, ISCC certified, and have Red List approved Declare labels. **Printed parts are 100% recyclable at end-of-life.**

* 75% reduction of carbon emissions from 3D printing, only compared to traditional downlights made from aluminum die cast. Only includes material supply, manufacturing and transport phases.

** The use phase, though having the highest impact during the life cycle, is excluded as it is the same between the 2 compared products.

Note: Data based on comparison of a traditionally manufactured downlight using a die casted housing with a 3D printed downlight in polycarbonate. Data for other products will vary.

American made & shipped

With our operations and factory facilities located conveniently along the East Coast of the United States we can domestically produce and deliver your luminaires.

We are effectively cutting out overseas shipping to reduce carbon emissions and accelerate your delivery time, among the fastest for customized products.

Buy American Act

As of the date of this document, our 3D Printed Luminaires meet the domestic preference requirements of the Buy American Act of 1933 (BAA). Prior to ordering a product, you should confirm the product's current compliance.

For a current list of BAA-compliant products please visit us online at:
www.signify.com/en-us/portfolio/baa
